

AWM GOES LIVE WITH FIRST FULL SCALE STANDING WAVE MACHINE

American Wave Machines (AWM) launched the FIRST ever surfing standing wave machine, SurfStream™. SurfStream™ is operating in East Riverton, NJ with surfers and bodyboarders from California, Oregon, and the East Coast participating in live demonstrations.

Solana Beach, CA (October- 2006) – American Wave Machines (AWM) announced that the industry’s first surfing machine, SurfStream™, is operational. The culmination of years of research and development has resulted in proprietary technology and a full scale standing wave machine that delivers real surfing and wave riding capabilities. SurfStream™ provides the number one most sought after surfing experience –“The Long Ride”. Differing from all other artificial wave technologies available, SurfStream™ accomplishes this in a compact area. The prototype was six times larger than the previous operational model and proves that waves of any practical size can be created.

The standing wave machine is unique in providing

- Endless Waves for Real Surfing
- Multiple Rider Capacity; Body Boarding and Surfing Simultaneously
- A Challenge for Experienced Wave Riders and Safe Enough for Novice Wave Riders
- Mobile and Permanent Installations

Last October during preliminary testing, experienced surfers and absolute beginners were all totally stoked.

“This is going to revolutionize surfing!” *Elijah Mack, President, World River Surfing Association*

“SurfStream™ will bring surfing anywhere.” *Jim Brennan, President, Sea Box, Inc.*

“It was totally fun!” ”This is awesome!” “I learned to surf!” *Mike, Ian, and John, High School Seniors*

AWM is pursuing opportunities in waterparks, surfparks, hotel resorts, and wave riding exhibitions. The machine is the perfect launch vehicle for any marketing campaign or special event.

ABOUT AMERICAN WAVE MACHINES

American Wave Machines, Inc. (AWM) began as Biomotive Engineering providing mechanical design and engineering services to the aerospace, amusement, intermodal transport, and biotechnology industries for over 10 years. Specializing in fluid dynamics, structures, and experimental methods, the Biomotive team sharpened its skills at designing and engineering cutting edge wave machines by working with sheet flow technology. Their expertise helped develop a fledgling operation into a well-known supplier of wave machines and included the development of the Swatch Mobile Wave, a concept whereby a wave ride attraction is mobile and driven from city to city for exhibitions. The Swatch Mobile Wave made global news and exposed the surf lifestyle to millions of potential surfers around the world. Building on the success of Biomotive Engineering, the AWM business strategy offers a quality engineered solution by providing innovative working wave technology backed by the experience, dedication and high ethics of the AWM team.
